Find your domain DNS host details

Damian JacksonUA - 2026-11-19 - Domain Name

Summary

This article describes how to find your domain DNS host details

Process

1. Browse to one of the following links
    1. For Australian domains (au, net.au, org.au, etc) browse to https://whois.auda.org.au
    2. For other domains (com, net, org) please browse to https://lookup.icann.org/en
2. Enter the domain you'd like to look up
3. In the information that is returned, look for 'Name server' entries

If the returned entries contain 'fastdns' or 'm21dns' then the DNS is hosted with Micron21.

If the returned entries are anything else, the DNS is hosted elsewhere.
