How to Enable LSAPI Handler in WHM

Binh Pham - 2026-11-10 - Virtual Private Servers (VPS)

Overview

The **LSAPI (LiteSpeed Server API) Handler** is a high-performance PHP handler optimized for **LiteSpeed Web Server**. It provides **faster processing**, lower memory usage, and better overall performance compared to other handlers like CGI or suPHP.

This guide will walk you through the steps to enable **LSAPI** for your PHP versions in **WHM**.

Step 1: Log in to WHM

1. Open your web browser and go to **WHM**.
2. Log in using your **root credentials**.

Step 2: Enable LSAPI in MultiPHP Manager

1. In WHM, search for **MultiPHP Manager** in the search bar.
2. Scroll down to the **PHP Handlers** section.
3. Look for your installed PHP versions
4. If LSAPI is not already selected, click **Edit** next to each PHP version and select **LSAPI** from the dropdown.
5. Click **Apply**.
