How to repair your database in cPanel

Binh Pham - 2026-05-07 - cPanel Shared Web Hosting

Overview:

If you're experiencing issues with your website, such as error messages related to the database or slow performance, running a database repair in cPanel can help resolve the problem. Follow the steps below to repair your database quickly and efficiently.

Prerequisites:

Validate your IP address via the Micron21 WebAuth. For more information, you can review our WebAuth article here.

Method:

1. Log in to cPanel
    1. Open your web browser and go to your cPanel login URL
    2. Enter your cPanel username and password.
    3. Click **Log in**.
2. Access the MySQL Database Section
3. In the **Databases** section of cPanel, click on **Manage My Databases**.
4. Select the Database to Repair
5. Scroll down to the **Modify Databases** section.
6. Locate the **Repair Database** option.
7. From the dropdown list, select the database you want to repair.
8. Click the **Repair Database** button.
