

## How to Repair Your Database in cPanel

Binh Pham - 2025-04-04 - cPanel Shared Web Hosting

If you're experiencing issues with your website, such as error messages related to the database or slow performance, running a database repair in cPanel can help resolve the problem. Follow the steps below to repair your database quickly and efficiently.

### Step-by-Step Guide to Repairing Your Database in cPanel

#### 1. Log in to cPanel

1. Open your web browser and go to your cPanel login URL
2. Enter your cPanel username and password.
3. Click **Log in**.

#### 2. Access the MySQL Database Section

1. In the **Databases** section of cPanel, click on **Manage My Databases**.

#### 3. Select the Database to Repair

1. Scroll down to the **Modify Databases** section.
2. Locate the **Repair Database** option.
3. From the dropdown list, select the database you want to repair.
4. Click the **Repair Database** button.
