How to Repair Your Database in cPanel

Binh Pham - 2025-07-27 - cPanel Shared Web Hosting

If you're experiencing issues with your website, such as error messages related to the database or slow performance, running a database repair in cPanel can help resolve the problem. Follow the steps below to repair your database quickly and efficiently.

Step-by-Step Guide to Repairing Your Database in cPanel

1. Log in to cPanel

1. Open your web browser and go to your cPanel login URL
2. Enter your cPanel username and password.
3. Click **Log in**.

2. Access the MySQL Database Section

1. In the **Databases** section of cPanel, click on **Manage My Databases**.

3. Select the Database to Repair

1. Scroll down to the **Modify Databases** section.
2. Locate the **Repair Database** option.
3. From the dropdown list, select the database you want to repair.
4. Click the **Repair Database** button.
