How to Review ImunifyAV Scan Results Within cPanel

Tom Matthews - 2024-05-08 - cPanel Shared Web Hosting

To access the malware scanning results of ImunifyAV, please follow the steps outlined below.

- 1. Log into your cPanel account
- 1. After logging in, proceed to the Security section located within your cPanel dashboard.
- 1. In this section, select ImunifyAV.
- After accessing the ImunifyAV plugin, review the files listed under the tab labeled "MALICIOUS."
 - 1. If you don't see any files listed, it indicates that your website is free of malicious files.
 - 1. If you observe files listed with a numerical value indicated in the Malicious section, it signifies that these files have been identified as containing malware
