How to review ImunifyAV scan results within cPanel

Tom Matthews - 2026-05-07 - [cPanel Shared Web Hosting](#)

Overview:

To access the malware scanning results of ImunifyAV, please follow the steps outlined below.

Prerequisites:

Validate your IP address via the [Micron21 WebAuth](#). For more information, you can review our [WebAuth article here](#).

Method:

1. Log into your cPanel account

Username

Password

Reset Password

OR

1. After logging in, proceed to the Security section located within your cPanel dashboard.

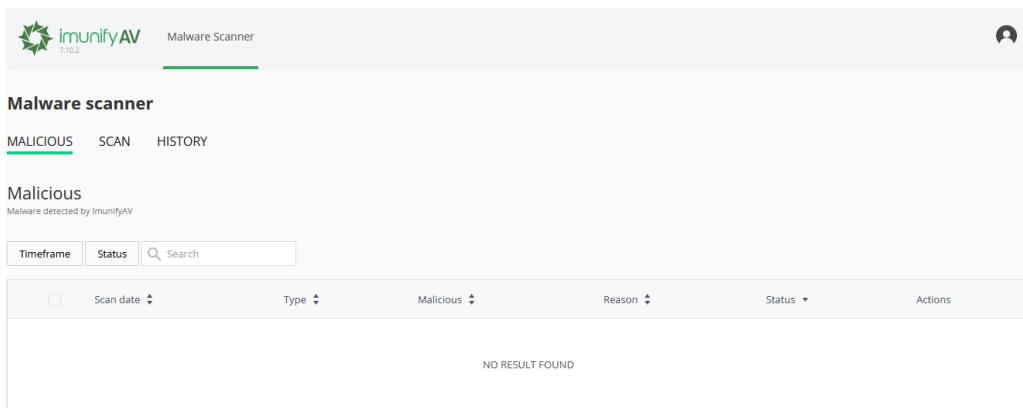

1. In this section, select **ImunifyAV**.

1. After accessing the ImunifyAV plugin, review the files listed under the tab labeled "**MALICIOUS.**"

1. If you don't see any files listed, it indicates that your website is free of malicious files.

1. If you observe files listed with a numerical value indicated in the Malicious section, it signifies that these files have been identified as containing malware
