How to deploy 100 VM instances in under 3 minutes in mCloud

Damian Jackson - 2025-05-09 - mCloud

Overview

Watch mCloud in action as we launch 100 virtual machines in under three minutes. This demo showcases the performance, scalability, and orchestration power of mCloud's virtual data centre platform.

In this video, you'll see:

- How to launch multiple VMs simultaneously
- Real-time provisioning using OpenStack
- How mCloud handles rapid deployment at scale
- Automated IP allocation and status tracking
- What happens behind the scenes during high-volume builds

This speed test demonstrates the efficiency of mCloud's compute infrastructure, including NVMe-backed Ceph storage, powerful Intel CPUs, and multi-site-ready architecture.
