Updating nameserver delegation in Domain Panel

Felix Lane - 2026-05-21 - Domain Name

Overview:

By default, all new domain names will use our cPanel Shared Web Hosting Nameserver records. If you have a new domain and a new cPanel service with Micron21, you should not need to make any changes to the domain delegation.

If you have purchased a domain from Micron21 and have your DNS hosted externally, or if you have purchased a Geographic Redundant DNS service for a dedicated Micron21 server, you will need to update your nameserver delegation within your Micron21 Domain Panel account.

Method:

1. Log into your Micron21 Domain Panel account: https://domains.micron21.com/
2. Click "**Domains**" to the left of the page once you've logged in.
3. Click on the domain you would like to update the nameservers for.
4. If "**Domain Lock**" is enabled, click the padlock icon to disable it.
5. Click on "**Manage Delegation**".
6. Add the nameserver records you need to. Be sure to delete any unnecessary records. You can also add any required additional records.
7. Once you have completed the required changes, click "**Update Name Servers**" to submit your changes.

Micron21 Nameservers:

VDNS (Domain Panel)

- **ns1.vdns.au**
- **ns2.vdns.au**

FastDNS (SWH cPanel)

- **ns1.fastdns.com.au**
- **ns2.fastdns.com.au**

- **ns3.fastdns.com.au**
- **ns4.fastdns.com.au**
